

## Reflection

I have made a good website, and it fits all my goals that I had, Using CSS and JS I have improved my website a lot as it used to look so plain and dead in A1 but now it looks like a well-developed website with a lot of features. I will not use this website as it is not too professional as I am still a beginner in web development. Also, the design of my website is really poor and, in the future, it will not be so basic and there will be more animations. Overall, this was a good assignment as it gives students something that they can use in the future.
